Take a screenshot on an iPhone X, iPhone XS, iPhone XR, or any model without a Home button

If you have a recent iPhone model – one that eschews a Home button in favor of Face ID – then you'll take a screenshot with the buttons on the sides of the phone.

1. Make sure that your iPhone displays whatever it is that you want to capture.

2. Press and hold the Power button on the right side of the phone.

3. At the same moment, press the Volume Up button.

Press the Volume Up and Power buttons simultaneously to take a screenshot on a current model iPhone. Dave Johnson/Business Insider
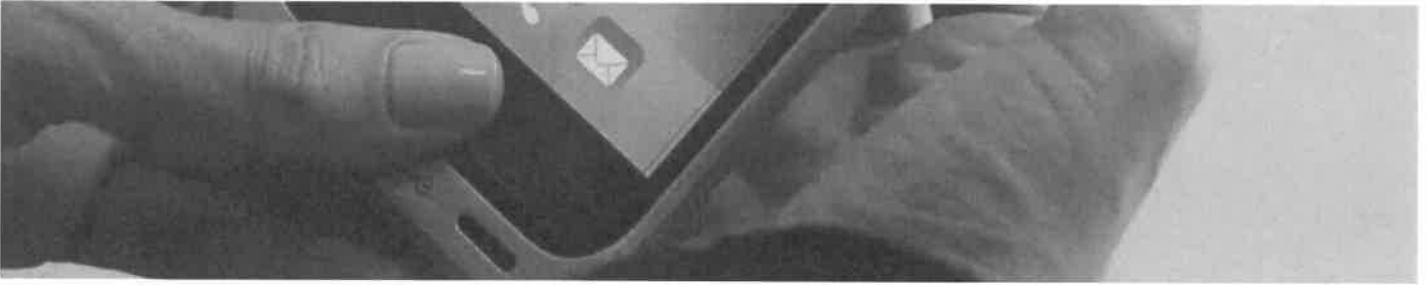

4. You should see the screen flash and an image of the screenshot appear in the lower left corner. Release both buttons. You can find the image in your Photos app.

Take a screenshot on an iPhone 8, iPhone 7, or any older model with a Home button

All iPhones from the earliest models through the iPhone 8 (and iPhone 8 Plus) use the Home button to take a screen shot.

1. Make sure that your iPhone displays whatever it is that you want to capture.

2. Press and hold the Power button on the right side of the phone.

3. At the same moment, press the Home button.
